PROFILE

Backend-leaning full-stack engineer with 7 years building a SaaS eCommerce platform, from backend systems to TypeScript storefront scripts. Led the re-architecture of a promotions engine used by thousands of Tiendanube merchants (~120ms P95) and shipped LLM-powered features. Experienced in system design, Test-Driven Development (TDD), and code review.

WORK EXPERIENCE

Software Developer | TITANPush | Remote Sep 2019 – Present

eCommerce Conversion Rate Optimization (CRO) SaaS. Grew from junior developer to go-to owner of the promotions system in a 3-developer team, while also maintaining the rest of the product and reviewing ~150 PRs a year.

- Co-built the PHP promotions engine in 2021 and remain its primary developer: a real-time cart validation endpoint that Tiendanube calls on every cart change (combinable discounts, MySQL + DynamoDB), with ~120ms P95 latency.
- Re-architected the engine's 9 subtypes from a single 800+ line class into per-subtype analyzers and configurations (Template Method, Strategy, Factory), backed by 170+ PHPUnit/Codeception regression tests; cut the time to add a subtype from 3+ days to under 1, then added 3 more (12 total).
- Built AI campaign generation on the OpenAI API: prompt-engineered banner and popup HTML generators and a flow that turns one brief into push, banner, and popup campaigns, with per-call token cost tracking.
- Built WhatsApp campaigns: Meta template management, per-recipient dynamic fields, timezone-aware scheduling, rate-limited sending, and error classification.
- Drove most of the migration of the legacy storefront script to Tiendanube's NubeSDK as a sandboxed WebWorker app in strict TypeScript (banners, popups with exit-intent/scroll triggers, product widgets, GA4), with 247 Vitest tests.
- Proposed and built promotion visibility tools: a per-cart debugging view in the admin backend and, in progress, a Python audit report (pandas, SQLAlchemy, Plotly) that flags stale, expired-but-active, and malformed promotions.

Software Developer (Freelance) | Dumbbell | Remote Feb 2025 – Jul 2025

Mobile fitness app, concurrent with TITANPush.

- Implemented the React Native + TypeScript UI and architected the service layer and PostgreSQL schema on Supabase; shipped the MVP to production.
- Set up the team workflow: branch protection, CI/CD with GitHub Actions, and coding standards.
- Cut redundant database calls with TanStack Query caching and query indexing; enforced RLS policies.

Teaching Assistant, Algorithms & Data Structures | Universidad de Buenos Aires (UBA) Sep 2021 – Aug 2023

- Mentored 30+ students in C data structures, algorithms, and Big O analysis; evaluated assignments and delivered detailed technical feedback on their code.

EDUCATION

B.Eng. in Computer Engineering | Universidad de Buenos Aires (UBA) Expected 2027

SKILLS

Programming: PHP • JavaScript • TypeScript • SQL

Backend & AI: REST APIs • Yii2 (Yii Framework) • OpenAI API • LLM Integration • Prompt Engineering • System Design • Design Patterns

Testing & Workflow: TDD • PHPUnit • Codeception • Vitest • BDD-style (Given/When/Then) • Code Review

Frontend & Mobile: JavaScript (Vanilla) • HTML/CSS • LESS • React Native • Expo • TanStack Query

Databases: PostgreSQL • MySQL • MariaDB • Supabase

Cloud & DevOps: AWS (S3, DynamoDB) • Git • Docker • GitHub Actions • Datadog

In Progress: Python • pandas • SQLAlchemy • FastAPI • Pydantic • pytest

Spoken Languages: Spanish (Native) • English (Professional Working Proficiency, B2)
